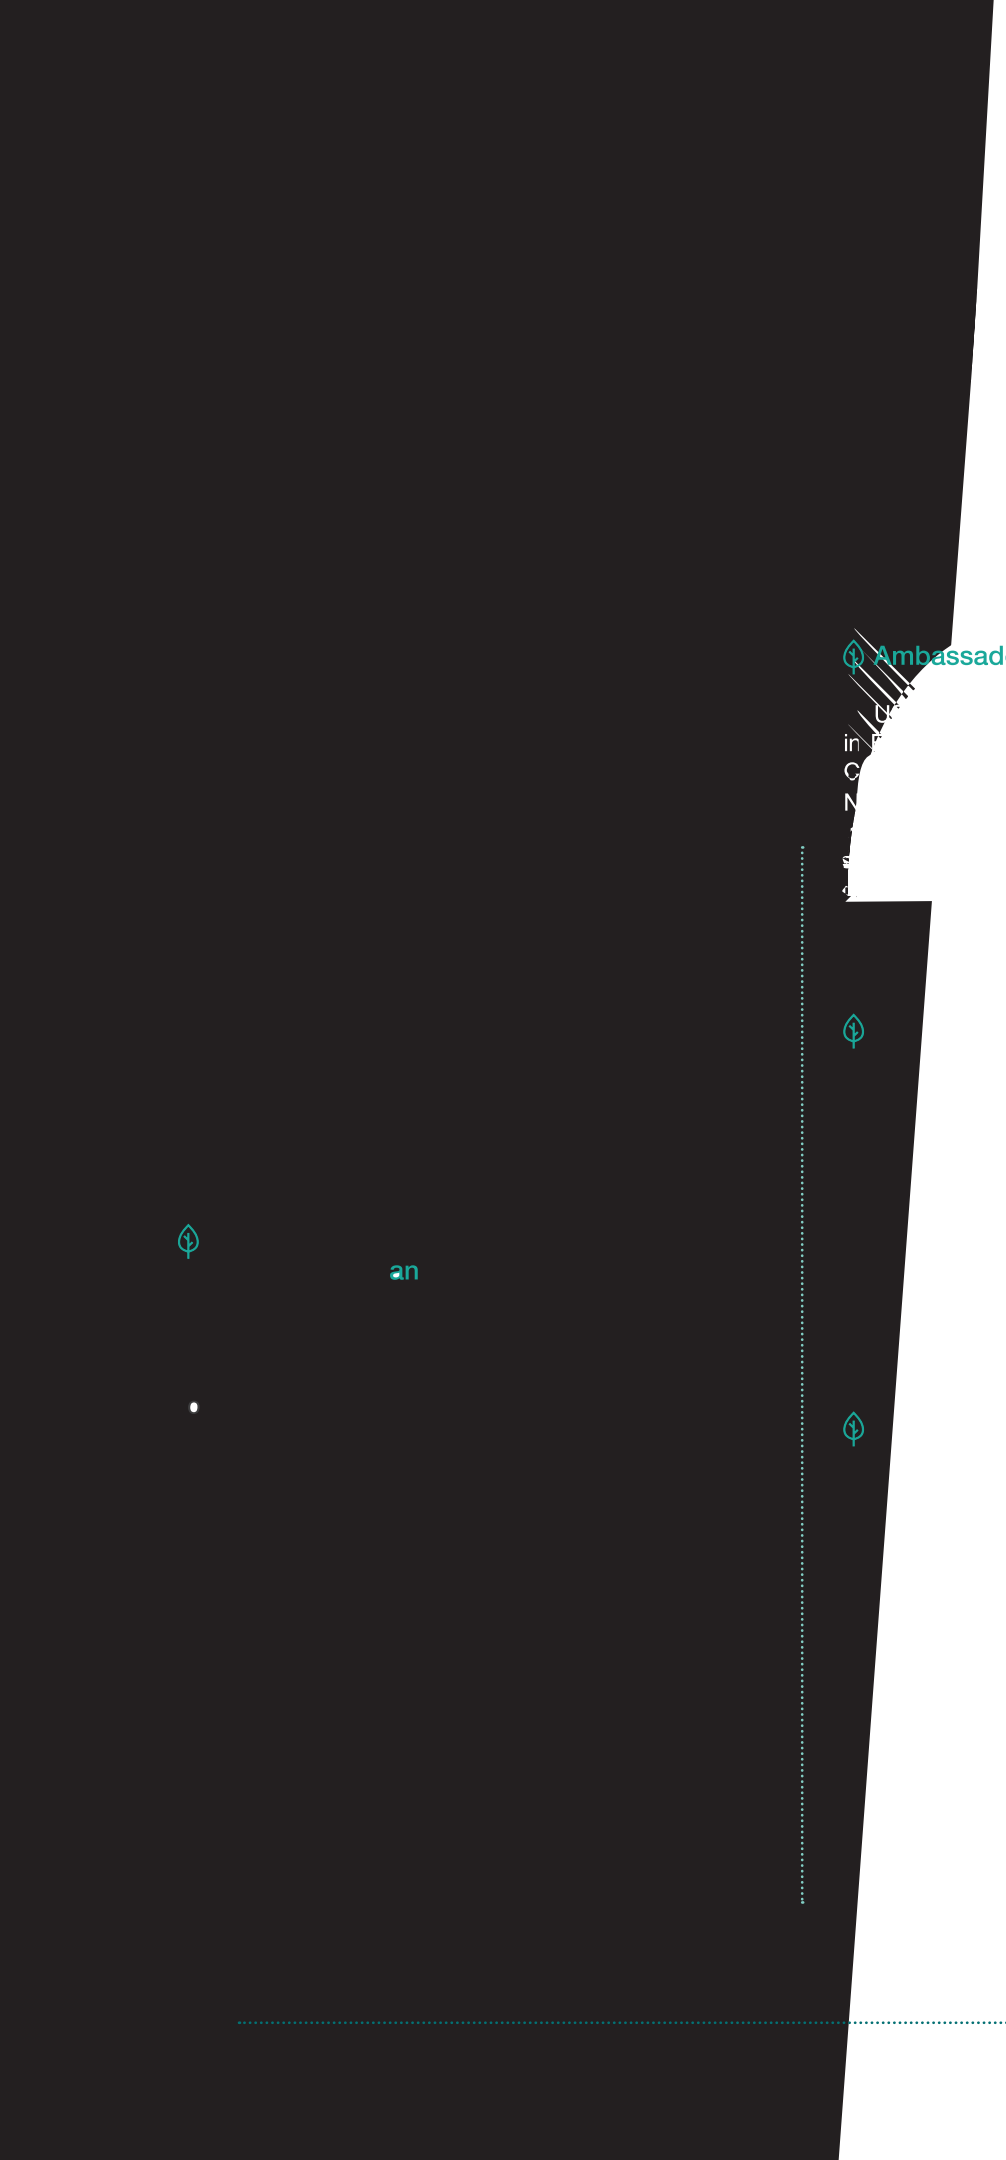
BORDER 2012 BORDER 2020

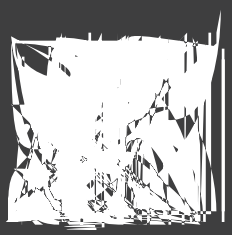
US - MEXICO ENVIRONMENTAL PROGRAM

Since 2005, BECC has worked with the Border 2012 Program (now Border 2020 Program), a collaborative effort of the United States and Mexico to improve the environment and protect the health of people living along the border. Through this partnership, several key programs and initiatives aimed at reducing air pollution, improving access to clean and safe water and increasing environmental stewardship have had a great impact along the border region. The work being done through Border 2012/Border 2020 supports communities in their efforts to improve environmental conditions and develop actions aimed at protecting the environment and public health along the US-Mexico border.

informed local instructors of the new technologies available to make accurate assessments and to train them as active agents of environmental and health awareness.

Ambassador Negroponte's Visit to Juarez





In 2018, BECC certified one air quality project aimed at decreasing harmful emissions caused by vehicle traffic on unpaved roads, and displacing greenhouse gas emissions produced by traditional fossil fuel based power generation.
